Micro-Needling System Advanced Rejuvenation

Advanced Rejuvenation - Ablative treatments like chemical peeling, microdermabrasion, and laser accomplish this task by removing the top layer of the skin. This equipment can be expensive thus treatments are very costly.

Microneedling is unique because it produces similar results without the expensive equipment and pose minimal risk. The microneedle therapy system will enhance and maintain your in-clinic treatments. The concept of the roller is to induce collagen synthesis and serve as a trans-dermal delivery system to increase penetration of active skin care ingredients, thus getting more out of your products.

DermaFix Microneedle roller uses very fine needles to "injure" the skin, accelerating wound Collagen and Elastin production. Resulting micro-channels also aid in interspersing DermaFix Correctives or serums for greater penetration and increasing overall efficacy. Absorption is increased by as much as 1,000 times when applied with the DermaFix Microneedle Roller.

Treatment with the Roller is more consistent in increasing the thickness of the skin than most other resurfacing treatments.

Retail - MT2 0.2 mm FOR HOME USE - R700.00 Vat Inclusive
MT5 and MT10 available for PROFESSIONAL USE only
