DeCeLerate

3 Peptides stimulate Fibroblasts to synthesize Collagen and Elastin

3

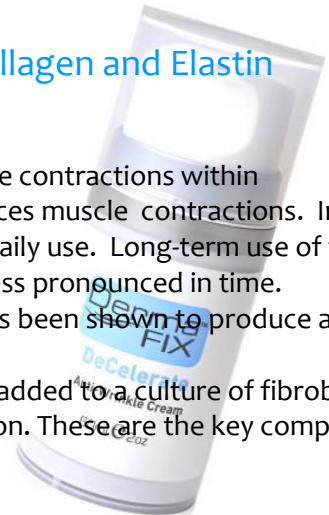

KEY INGREDIENTS:

MATRIXYL ACETYL HEXAPEPTIDE - 3: Acetyl hexapeptide-3 relaxes muscle contractions within minutes of application. It does not paralyze muscles like Botox, but reduces muscle contractions. In testing, acetyl hexapeptide-3 reduced wrinkle depth by 27% after 30 days of daily use. Long-term use of this active ingredient produces a benefit similar to Botox and lines become less pronounced in time.

ARGIRELINE: The reduction in muscle movement caused by Argireline has been shown to produce an anti-aging effect.

OLIGOPEPTIDE: Researchers have found that palmitoyl oligopeptides, when added to a culture of fibroblasts (key skin cells), stimulates collagen, elastin and glucosaminoglycans production. These are the key components of healthy-looking skin.

Retail Price 60ml R598.00

4 Watch this space for a **NEW Eye Treatment** containing Peptides and Hyaluronic Acid!!

5 **WORLD CUP JUNE 2010**
Please remember to place your orders well in advance! Due to the massive demand for courier services during the 2010 World Cup, delays could be expected!
